## PREDICTABILITY CHALLENGES

- > Can the airspace accommodate the AOs schedules?
- > The Predictability Conundrum. @ D-11 don't know where I'm going
- > Until now, route selection based purely on OFP efficiency. Minimum cost/fuel burn. No consideration of airspace capacity/bottle necks
- > Educated guess work by ANSPs
- > Shifting priorities – reduce OFP efficiency, increase operational efficiency
- > Proactive Vs Reactive
- > Scenario/DSNA Cap/Hot Spots – building them into the flight planning system
- > Analysis of our own delay data and routing accordingly

- > Avoid repetitive work for Dispatchers/consistently filling through a hotspot
- > Better OTP for us, better predictability for you around hotspots
